CHQ MODULES INSTALLATION INSTRUCTIONS

Products Covered: CHQ SZM (Single Zone Monitor), CHQ-DIM2 (Dual Input Module), CHQ-DZM (Dual Zone Module)

Introduction

The CHQ "Smart-Fix" Range of input Modules consists of the following models:

Dual Input Module	Dual Zone Module	Single Zone Monitor
CHQ-DIM2(SCI) CHQ-DIM2/DIN(SCI)	CHQ-DZM(SCI) CHQ-DZM/DIN(SCI)	CHQ-SZM2(SCI) CHQ-SZM2/DIN(SCI)

Note: (SCI) indicates Module incorporates a short-circuit isolator. DIN indicates Module housing is designed to fit standard "Top Hat" DIN Rail.

Components

Standard "Smart-Fix" Modules (including (SCI) versions) are supplied as two individual components (see Fig 1 & 2). DIN versions are supplied as one unit (see Fig 3).

Setting the Loop Address

❑ The analogue address of the Module is set using the first 7 switches of the 8-bit DIL switch, which in the case of the standard CHQ is located through the cut-out section on the top of the PCB cover. On the DIN version this switch is located on the edge of the PCB behind the clear door (see Fig 3).

❑ The switches are numbered 1 to 8 (left to right):

CHQ MODULE	SWITCH **UP**	ON	
	SWITCH **DOWN**	OFF	
DIN MODULE	SWITCH **UP**	OFF	
	SWITCH **DOWN**	ON	

❑ The switches should be set using a small-tipped screwdriver or similar.

❑ Refer to the Address Chart (Fig 9) on page 4 for a quick reference on addresses.

CHQ-DIM2 - DUAL INPUT MONITOR
This device is a loop-powered module designed to interface to a variety of inputs, such as, door contacts, sprinkler flow/door switches and plant equipment fault contacts, this module is particularly suited to applications where a fast response is required to the input change.

Setting Contact Monitoring (Compatibility mode)
Both volt free input contacts can be configured to be either N/O or N/C, by setting the 2-bit DIL switch

CHQ MODULE	SWITCH 1 UP	I/P 1 Normally Closed (N/C)
	SWITCH 1 DOWN	I/P 1 Normally Open (N/O)
	SWITCH 2 UP	I/P 2 Normally Closed (N/C)
	SWITCH 2 DOWN	I/P 2 Normally Open (N/O)
DIN MODULE	SWITCH 1 UP	1I/P 1 Normally Open (N/O)
	SWITCH 1 DOWN	1I/P 1 Normally Closed (N/O)
	SWITCH 2 UP	1I/P 2 Normally Open (N/O)
	SWITCH 2 DOWN	1I/P 2 Normally Closed (N/O)

Setting EOL Monitoring Option (Enhanced mode)
Select the required EOL monitoring option using the 2-bit DIL switch. NOTE: EOL monitoring capability on this device can only be enabled if the panel supports it.

CHQ MODULE	SWITCH 1 UP	I/P 1 Normally Closed (N/C)
	SWITCH 1 DOWN	I/P 1 Normally Open (N/O)
	SWITCH 2 UP	I/P 2 Normally Closed (N/C)
	SWITCH 2 DOWN	I/P 2 Normally Open (N/O)
DIN MODULE	SWITCH 1 UP	1I/P 1 Normally Open (N/O)
	SWITCH 1 DOWN	1I/P 1 Normally Closed (N/O)
	SWITCH 2 UP	1I/P 2 Normally Open (N/O)
	SWITCH 2 DOWN	1I/P 2 Normally Closed (N/O)

Table Showing example of single input operation

	Input State			
	Compatibility mode (Mode 0) Input Monitoring Disabled		Enhanced mode (Mode 1) Input Monitoring Enabled	
Resistance Threshold	Normally Open	Normally Closed	Normal Polarity	Reversed Polarity
<50 ohms (short cct)	Active	Normal	Short cct fault	Short cct fault
200 - 3 k ohms (470 ohms)*	Normal	Active	Active	Normal*
5 k – 15 k ohms (10 k ohms)*	Normal	Active	Normal*	Active
>100 k ohms (open cct)	Normal	Active	Open cct fault	Open cc fault

*If required the EOL resistor should be appropriate to the selected polarity setting when in enhanced mode (i.e. the normal state resistance threshold)

*1 Fire alarm control panel compatibility required for these products.   *2 Note: - Add 85 µA per input for normally closed contact monitoring See AP0127 for short-circuit isolator specification.
CHQ-DZM - DUAL ZONE MONITOR
This device is an externally powered module designed to allow up to 60 conventional detectors (30 per zone) to be interfaced to Hochiki's ESP analogue addressable system. The unit features three End Of Line (EOL) monitoring options (see page 3 for further details).

Setting EOL Monitoring Option
Select the required EOL monitoring option using the 2-bit DIL switch.

(Loop connections as per CHQ-DIM above)

CHQ-SZM SINGLE ZONE MONITOR is a loop-powered module that provides a single fully monitored input for the connection of up to six Hochiki conventional smoke or heat detectors, or any number of conventional call points, the unit also contains an output for remote fire indication.

Note: The end of line device (EOL) is supplied with the unit – **do NOT discard in error!** The EOL device MUST be fitted at the last detector on the zone, note the polarity.

This module does not support any line continuity options; therefore, if Manual Call Points are to be interfaced then these should be connected first.

Installation – "Smart-Fix" Version

Set analogue address before installation (see page 1). The fixing surface should be dry and stable.

- ❑ Hold the back plate up against the fixing surface and mark the position of the four corner fixing holes.
- ❑ Determine which cut-out sections along the top and bottom edges of the module require removing to accommodate the cables being used.
- ❑ Remove cut-outs by scoring with a sharp knife before breaking off with pliers or snips.
- ❑ Mount the back plate using appropriate fixings (not supplied) for the fixing surface.
- ❑ Terminate and connect field wiring as per the wiring diagrams on pages 2 & 3 (and the terminal block indications on the product label).

The transparent lid (CHQ-LID) is supplied with four screws and eight retaining washers.

- ❑ Push the screws through one of the retaining washers and then through the holes in the lid from front to back, pushing another retaining washer onto the end inside the lid.
- ❑ Screw the lid onto the back plate; do not over tighten the screws as this could damage the unit.

Note, a white plastic version of the lid is available (sold separately – CHQ-LID(WHT)).

Fig 9

Installation with Back Box

For CHQ-DIM2 or CHQ-SZM installations requiring glanded cables, a module back box (CHQ-BACKBOX) is available (sold separately). This is mounted on the fixing surface; the CHQ Module is then fitted to the top of the back box and the CHQ-LID is added creating a sealed enclosure. For further details refer to the CHQ-BACKBOX Instructions (2-3-0-800). For CHQ-DZM installations utilising heavy-duty cabling (for example, 1.5mm2 solid conductor) the use of the SMB-1 Box with the SMB-ADAPTOR plate and CHQ-ADAPTOR is recommended. For further details refer to the SMB-ADAPTOR Instructions (2-3-0-1502). Ensure any glands used (not supplied) conform to IP67, if such ingress protection is required.

Installation – DIN Version

Set analogue address before installation (see page 1) and write loop address in space provided on door label.

- ❑ DIN modules should be mounted in a suitable enclosure in conjunction with an NS 35 mounting rail with the loop connections at the bottom of the unit. Hochiki recommends the SMB-2 and SMB-3 Boxes designed specifically for this purpose.
- ❑ Terminate and connect field wiring as per the wiring diagrams on pages 2 & 3 (and the terminal block indications on the product label).
- ❑ Suitable anti-static precautions must be taken when handling these products.

Status LEDs

Refer to the table below for Status LED indications:

CHQ-DIM2 (all variants)	Dual Input Module	Green LED flashes each time the unit is polled by the fire alarm control panel and is continuously illuminated when either input is active (CHQ-DIM only). Amber LED is continually illuminated when unit detects short-circuit fault.
